

September 29, 2015

Dear Sirs;

Nonin and aCARDIOz embarked upon a joint relationship to create a seamless network transmitting data from Nonin's leading edge FDA approved 9560 Bluetooth devices. The Nonin vision was to utilize Nonin devices with aCARDIOz's network to create a revolutionary way for medical data to be collected and received.

aCARDIOz and Nonin engineers have worked closely over the past 5 years to insure that the Nonin 9560 Bluetooth capabilities work reliably with the aCARDIOz technology.

Nonin has worked with aCARDIOz and found their solution offers a scalable, cost effective, and portable data delivery mechanism for patient monitoring. The aCARDIOz system is a cellular based solution and compliments Nonin's wireless Bluetooth enabled oximeters. The aCARDIOz program automatically pairs Nonin devices to a smartphone and provides the consumer an easy-to-operate and portable solution. Moreover, the data collected from our devices is visible to the caregiver on the aCARDIOz Dashboard and offers auto-generated alerts for high/low readings sent directly to caregiver or patient support managers.

Nonin is proud to offer its Bluetooth oximetry devices and we're highly supportive of aCARDIOz and this industry leading solution. Please be assured we are ready to supply our kits to large patient populations.

Thank you for your kind consideration. Please do not hesitate to contact me if you have questions or need additional information.

With Best Regards,

Steve Carey
U.S. OEM Sales Manager
Nonin Medical Inc.
